Contents

Preface ix
1. Scope: calibration and validation 1
2. Definitions 3
2.1 Equipment 3
2.2 Measurement 3
2.3 Calibration and validation 4
2.4 Statistical terms 5
3. General considerations: calibration and validation 9
4. Preconditions for analyser calibration and validation 11
4.1 General 11
4.2 Factory Acceptance Testing (FAT) 11
4.3 Site installation 11
4.4 Site Acceptance Testing (SAT) 12
4.5 Site precision 12
4.6 Read-out instrumentation 12
5. Principles of initial calibration, correlation and initial validation 13
5.1 Initial calibration and correlation 13
5.2 Probationary/initial validation 14
5.3 Analyser result and accepted reference value comparison methods. 14
6. Principles of routine validation and calibration adjustment 15
6.1 General 15
6.2 Analyser result and reference test/primary test method comparison techniques 16
6.2.1 Reference sample method 16
6.2.2 Paired sample method 16
6.3 Routine validation (scheduled check of continuing performance) 17
6.4 Calibration adjustment (adjustment, if required, to re-establish analyser results within performance limits) 17
6.5 Routine validation and calibration adjustment intervals 18
6.6 Number of result values required for routine validation and calibration adjustment 19
6.7 Routine validation and calibration adjustment of model based/chemometric process analysers 20
7. Comparison methods: reference sample method and paired sample method 21
7.1 Comparing analyser and reference method results 21
7.2 Routine validation and calibration adjustment using the reference sample method 22
7.2.1 Advantages and limitations 22
7.2.2 Choice of reference samples 23
7.2.3 Testing of reference samples 23
7.3 Routine validation and calibration adjustment using the paired sample method 24
7.3.1 Advantages and limitations 24
7.3.2 Collecting paired sample results 25
8. Evaluation of routine validation and calibration adjustment results: use of statistical tools and control charts 27
8.1 General 27
8.2 Use of statistical tools 27
8.3 Routine validation and calibration adjustment: use of control charts 27
8.3.1 CUSUM approach 29
8.4 Control chart limits 30

8.5 Control chart limits derived from analyser reference sample or paired sample laboratory data 31
Appendix 1: Example interpretation of control chart readings 33
Appendix 2: Determination of control chart limits by measuring standard deviations of differences 35
References and Bibliography 37

Figures

Figure 1 Example of a control charting diagram.....28
Figure 2 Examples of analyser results in a CUSUM chart.....29
Figure 3 Example of accurately distributed control chart reading.....33
Figure 4 Example of biased control chart reading.....33
Figure 5 Example of drifting control chart reading.....33
Figure 6 Example control chart reading; value outside warning limit.....34
Figure 7 Example determination of control chart limits by measuring standard deviations.....36

Tables

Table 1 Sample validation uncertainty results.....19
Table 2 Example of the control chart limits for a distillation analyser.....35
