

Asset Integrity Leadership Certificate (AILC™)

For Leaders in the industrial asset integrity environment

An EEMUA blended-online course designed for experienced and new Leaders working in asset integrity.

Called for and created by industry to help address the leadership challenges that can contribute to near misses, incidents and major accidents on sites with hazardous materials or processes.

AILC is designed to develop and test understanding and application of legal, regulatory, guidance and good practice aspects of asset integrity management and leadership in industrial businesses and organisations; helping assure that companies' industrial assets reliably perform their essential safety functions.

Topics are addressed over four Learning Cycles of four weeks each:

- LC1 Leadership mindset
- LC2 Team engagement
- LC3 Decision making
- LC4 Influence

Each Learning Week comprises a one-hour live-online tutorial and two hours of directed, independent learning. On-demand recorded lectures and written materials provide further support.

Course activities are tailored to each Leader's site(s)/organisation and follow EEMUA's AILC Competency Framework.

Passing the end of course assessment (consisting of a submitted portfolio of work and two-part exam) provides a certificate for EEMUA AILC.

**Pilot AILC course (portfolio parts of LC1-LC4) for EEMUA Members only:
21 October-22 November 2024.**

**Full AILC course (portfolio plus exams for LC1-LC4) open to all:
3 February-12 June 2025.**

Registration open now on the EEMUA website for both the pilot and full courses.
